

Shakespeare® Style CDP-2 Cell Phone Dash Mount Connector Kit

- Provides quick disconnect of Shakespeare Cell Phone Adapter cables to a shipboard cellular antenna
- Antenna coax permanently attaches to the back of the connector. (TNC female)
- Rubber cap protects front connector (TNC male) when not in use

INSTALLATION

1. Select a mounting location for the CDP-2 where:
 - a. You can route the coax from the cellular antenna to the CDP-2
 - b. It is within 5 feet of where the phone will be used (CPA Cables are 5' long)
2. Mark the center location for drilling. Make sure there is nothing behind the location before drilling. Using a 5/8" bit, carefully drill a straight hole.
3. Run the cellular antenna's coax through the hole. If the coax does not already have a male TNC connector, install one now. Attach the male TNC from the antenna to the female TNC on the backside of the CDP-2.
4. With the cap tether in the 6 o'clock position, put the cable and the adapter into the hole. Holding the CDP-2 centered in the hole and flat against the surface, carefully mark the four mounting screw holes.
5. Remove the CDP-2 from the hole. Using a 3/32" bit, carefully drill the four holes, making certain they are straight.
6. Remove the self-adhesive tape from the back of the CDP-2 and carefully place it in position with the cap tether in the 6 o'clock position. Snugly tighten the four mounting screws.
7. When the CDP-2 is not in use, place the rubber cap over the connector.

Shakespeare offers a number of CPA cables to fit most popular cellular phones.
Ask your dealer or contact Shakespeare for an up-to-date list.

The logo features the word "Shakespeare" in a stylized, cursive script font. Above the text is a solid blue horizontal bar, and below it is a solid green horizontal bar. A registered trademark symbol (®) is positioned to the upper right of the word.
